**ILD ANNOUNCES INTEGRATED AUDIO AND WEB RECORDING
TO ROLLCALL BUSINESS CONFERENCING PLATFORM**

PONTE VEDRA BEACH, FLORIDA April 25th, 2005 – RollCall Business Conferencing, a division of ILD Telecommunications, Inc., announces the successful roll-out of its latest audio and web conferencing enhancement, called “Web-Recorder”. This service provides the ability to record both audio and web through the RollCall DataXchange product.

“This latest feature provides a more comprehensive collaborative conferencing solution. We continue to invest in the latest technologies to enable our customers to enhance their conferencing experience,” said Fred Lloyd, SVP of Strategic Planning and head of RollCall Conferencing for ILD.

RollCall’s newest feature provides the ability to record for playback and future reference, a reservationless, operator-assisted audio and web conference right from a user’s desktop. This is exceptionally valuable to companies providing any kind of training, in that it eliminates the expense associated with recreating the training session. One can now simply record the session and post the file to their internet or intranet sites for playback. “It reduces costs and maximizes productivity,” stated Mr. Lloyd.

A small desktop application enables conference hosts or designated representatives to record desktop activity along with an audio conference call and make it available for replay. RollCall’s newest feature, Web-Recorder, provides the ability to record any web collaboration application including slide presentations, application sharing, whiteboard and chat through DataXchange. In addition, users have the ability to record desktop applications that are not being shared with a collaboration tool to create on-the-fly training and marketing collateral.

RollCall’s Web-Recorder provides users the ability to manage and archive all recordings online. Users can download copies of recordings, order CD/DVD copies for distribution and even set availability of replays and view live listen reports for each recording. RollCall securely stores all recordings on the platform for as long as each user needs, and can be deleted at any time.

According to Camille Andersen, VP of Sales RollCall Conferencing Division, "One hundred percent attendance in meetings are rare, so Web-Recorder offers managers or conference hosts a way to ensure their meeting content is delivered to everyone -whether real time or replay." Ms. Andersen adds, "It's really ideal for training seminars and for rebroadcasting events to attendees who couldn't make it or had to leave early. We've been very pleased with user feedback indicating that Web Recorder is feature-rich, simple to use and offers great quality results! "

RollCall Business Conferencing has posted a demo of the new application at <http://www.800rollcall.com/news.aspx>
